

Thrive Logic Brings AI-Powered Autonomy to Drones

Turning Robotic Surveillance into Smart, Automated Action

Thrive Logic partners with robotics manufacturers to **supercharge aerial and ground-based drones** with our AI models and VMS.

Video streams from the drones are displayed on **Thrive VMS**. So, customers have **one platform** to view and manage feeds. Users then **deploy custom rules** to **automate drone actions**.

Thrive Logic's AI unlocks automated actions for the drones to follow. For example:

- "While touring the perimeter overnight, if a person is detected, alert the guard center."
- "While touring the main facility, if debris or liquid is detected in a forklift lane, sound alarm."
- "If a fire is detected, move closer to investigate and send an alert."
- "Record license plates of each vehicle upon parking in parking lot."

The Value:

- Faster response times
- Total threat visibility 24/7
- Close the gap on staffing shortages
- Safer incident response
